

PROFESSIONAL MARKING

QUALITY with tradition

The company MOTIP DUPLI can look back on a long history, stretching back to 1946. It was in this year, in Switzerland, that company founder Kurt Vogelsang introduced the spray can to the European market, laying the foundations for a continuous, long-lasting success story. Today, after more than seven decades of existence, what was once a tiny operation has become Europe's number one for spray paint and touch-up pens, with three manufacturing sites and 11 subsidiary companies.

In 2019, more than 138.5 million spray cans, 4 million touch-up pens and 1,600 tonnes of filler were produced. This includes the products in the Colormark range – professional marking sprays.

The high quality standards are upheld by certified production processes designed in accordance with DIN EN ISO 9001, 14001 and 50001. In the company's Hassmersheim factory, regular investment in modernisation of the systems, qualified training sessions for employees and user-orientated production concepts constitute the basis for strong growth.

COLORMARK

Marking spray

For many years now, the high-quality marking concept COLORMARK has been providing sprays to meet the most challenging requirements and a range of application areas. Whether for construction site, road or event markings – COLORMARK has the right product for your desired purpose.

And simplified icons on the label help professional users quickly identify what they need. The most important characteristics of the respective marking sprays are therefore available at a glance.

What's more, a colour-coding scheme ensures the various marking sprays, such as Spotmarker, Linemarker, Ecomarker and Allroundmark-er, are easier to differentiate from one another. The colours available in the respective product range are also shown on the label, making reordering easier.

EXPLANATION OF ICONS

TOP COVERAGE

Coverage for a can of COLORMARK Allroundmarker, depending on spraying distance and coating thickness.

TOP COVERAGE

Coverage for a can of COLORMARK Spotmarker, depending on spraying distance and coating thickness.

TOP COVERAGE

Coverage for a can of COLORMARK Ecomarker, depending on spraying distance and coating thickness.

SPEEDLINER-COMPATIBLE

Coverage for a can of COLORMARK Linemarker in the Speedliner marking cart, depending on spraying distance and coating thickness.

SELF-CLEANING

Venting of the marking spray after use not necessary. 100% guarantee spray valve empties.

EASY TOUCH SYSTEM

User-friendly handling thanks to the patented one-handed safety cap with lockable spray trigger.

360° APPLICATION

The 360° valve on the COLORMARK Allroundmarker enables all-around markings in all positions and directions.

TOP LUMINOSITY

The fluorescent colours are intensely luminous due to the specially selected, high-dose luminous pigments.

TOP COVERING POWER

Highest coverage power of the non-fluorescent colours.

ECOLOGICAL

Especially environmentally friendly chalk-based marking spray containing ingredients not harmful to plants.

LIGHT AND WEATHER-RESISTANT

Especially durable, wear-resistant special marking spray, for long-lasting safety markings.

CLEAN EDGES

The Linemarker's valve and spraying system guarantees clean, sharp edges when marking, with minimum spray mist.

EXTREMELY QUICK DRYING

Extremely quick drying time, fully resilient after 24 hours.

FOR INDOOR AND OUTDOOR USE

Suitable for indoor and outdoor use.

VERY HIGH RESILIENCE

For markings which demand the very highest levels of resilience.

HOW TO – Tips for marking

General

The surface to be marked must be clean. The substrate can be damp, but not wet, and unevenness affects the appearance of the marking. To ensure clean-edged results, we recommend masking the area to be marked.

After applying a quick first pass to serve as a base coat, apply a second and possibly third coat, to slowly build up to the desired coating thickness.

What must you bear in mind?

The process of applying markings where people's safety is a factor must always be carried out in accordance with regulations on the prevention of accidents, occupational safety and transport.

Different substrates

Concrete: Waiting time of around three to four weeks before applying markings to new concrete floors.*

Tar, asphalt: Waiting time of around 15 days before applying markings to new asphalt.*

Synthetic floors (for example warehouses, sports halls, workshops): Due to the large number of possible materials (plastic, varnish, PVC), incompatibilities can result. Before applying the markings, spray a test area in an inconspicuous place.

* All details are approximate values, and apply to the period until marking works are possible.

Construction site markings

The Spotmarker and Allroundmarker have been designed for use on various substrates. They achieve a good bond to asphalt, concrete, brickwork, plaster, earth, gravel and many other substrates (including moist substrates).

Line marking

The Linemarker products are especially suitable for marking parking spaces, workshops, warehouses, open spaces and industrial facilities, but also playgrounds and sports grounds.

Coverage

Spotmarker: 250 to 300 m

Allroundmarker: up to 400 m

Ecomarker: 500 ml up to 260 m, 750 ml up to 390 m

Linemarker: 500 ml up to 40 m (spray width 10 cm), 750 ml up to 60 m (spray width 10 cm)

2K Linemarker: up to 30 m (spray width 10 cm)

Quality and development

Not without reason is the MOTIP DUPLI Group Europe's number one for spray paints and touch-up pens. Our high quality standards are guaranteed by certified production processes designed in accordance with DIN EN ISO 9001, 14001 and 50001, securing for our customers consistent product benefits.

Continuous product improvements, orientated to environmental and user requirements, are reflected in the company's success.

SPOTMARKER

Knowhow for a
wide range for markings

SPOTMARKER FLUO

**COLOR
MARK**

PROFESSIONAL MARKING

Very highest visibility levels, for greater safety

The Fluo Spotmarker's ideal usage conditions are anywhere where increased visibility is required, even under the most challenging working conditions. Due to the increased proportion of fluorescent paint components, the sprays are easily noticed and are irreplaceable for structural and civil engineering works and road construction, as well as surveying works carried out by municipalities or industry.

Characteristics

- Professional, precise wall and floor markings thanks to special tilting valve
- Can be used on lots of substrates (asphalt, concrete, brickwork, plaster, wood, earth and many more)
- Patented one-handed safety cap with lockable spray trigger
- Easy-touch spraying
- No paint-stained fingers
- Outstanding bond, even on damp substrates
- Depending on the condition and colour of the substrate, 500 ml can cover up to around 250–300 m
- Reliable spraying down to -20°C
- 100% guarantee spray valve empties
- No venting of the marking spray required after use (self-cleaning valve)
- Intense, lasting luminosity (10–12 months)
- Environmentally friendly and not injurious to health

	201523	Spotmarker Fluo, fluorescent blue	500 ml	 4 048500 201523

* Perfect for light-coloured substrates

Notes on use

Easy to apply, even when wearing gloves, thanks to one-handed safety cap.
The colour pigments contained are easily shaken up, even after a longer storage period.
Dust-dry after 10 minutes, completely dry and ready for recoating after 24 hours.

Tip:

Even marking sprays with a safety cap can be used with marking accessories.
See pages 22–23.

SPOTMARKER NON-FLUO

**COLOR
MARK**

PROFESSIONAL MARKING

Reliable and economical

Professional construction site marking for use in structural or civil engineering works, building sites and road construction.

Can also be used in tunnels and mining works.

Characteristics

- Professional, precise wall and floor markings thanks to special tilting valve
- Can be used on lots of substrates (asphalt, concrete, brickwork, plaster, wood, earth and many more)
- Patented one-handed safety cap with lockable spray trigger
- Easy-touch spraying
- No paint-stained fingers
- Outstanding bond, even on damp substrates
- Depending on the condition and colour of the substrate, 500 ml can cover up to around 250–300 m
- Reliable spraying down to -20°C
- 100% guarantee spray valve empties
- No venting of the marking spray required after use (self-cleaning valve)
- Wear-resistant, water-resistant markings for up to 9 months
- Environmentally friendly and not injurious to health

Tip:

The black marking spray can also be used as a correction spray for removing luminous markings on tar.

ALLROUND-MARKER FLUO

**COLOR
MARK**

PROFESSIONAL MARKING

Inscription made easy

Thanks to its writing spray head with safety cap, the Allroundmarker special marking spray is perfect for precise inscriptions. The 360° valve enables spraying in all positions and directions. An outstanding marking tool for tunnel construction, electricians, municipalities, industry and for countless other applications.

Characteristics

- Professional, precise wall, ceiling and floor markings
- 360° valve for all-around marking
- Can be used on almost all substrates
- Robust one-handed safety cap
- High coverage and economical
- No paint-stained fingers
- Outstanding bond, even on damp substrates
- Depending on the condition and colour of the substrate, 500 ml can cover up to 400 m
- Reliable spraying down to -20°C
- 100% guarantee spray valve empties
- No venting of the marking spray required after use (self-cleaning valve)
- Markings remain vibrantly visible for 9–12 months
- Environmentally friendly and not injurious to health

PRODUCTIVITY

Chalk-based marking

The special chalk-based formula makes the Ecomarker an especially environmentally friendly marking spray. Due to ingredients that are not harmful to plants, the marked objects are not damaged. Thanks to being chalk-based, the markings are easy to remove with water. After sustained rainfall or heavy mechanical stress, reapplication may be necessary.

Characteristics

- For short-term markings (a few days to a few weeks)
- Easily removed with water
- Does not damage the object being marked (for example lawns)
- Patented one-handed safety cap with lockable spray trigger
- High coverage and economical
- No paint-stained fingers
- Depending on the condition and colour of the substrate, 500 ml can cover up to 260m and 750 ml up to 390 m
- Reliable spraying down to -20°C

Also ideal for social distancing markings

HOW TO – Tips for marking

Not all lines are created equal

Roads

It always depends where the markings are made. The law is clear on this: Where markings serve to regulate and control traffic flows, such markings on the carriageway are traffic signs, and therefore an important element for road safety. Your country's regulations governing road markings should contain all the relevant information.

Construction sites

On construction sites too, routes are marked, in order to regulate traffic. The safety of people working on construction sites is paramount, but the smooth running of the building works must also be guaranteed. Durable, reliable marking sprays offer a high degree of flexibility, providing the necessary leeway for individual solutions. The COLORMARK line markers can be applied freehand, or with the aid of spraying accessories and marking carts.

Car parks

A well-organised car park leaves a good impression, even if it is not strictly necessary to apply parking markings on your own company's premises. In public spaces, the requirements of road traffic regulations and other relevant bodies must also be obeyed.

Workshops/warehouses/open spaces and industrial facilities, but also playgrounds and sports grounds

Correct markings not only minimise the risk of accidents, but also increase efficiency, because footpaths and escape routes, as well as routes for forklifts, help ensure smooth operational processes. Wherever information has to be conveyed quickly, floor markings are essential.

1 or 2 components?

Depending on requirements, you should take into account the following criteria when choosing the correct marking spray:

- Resistance to wear
- Resistance to weather
- Drying time
- Spray width
- Covering power/effectiveness

LINEMARKER

Professional marking
of lines, corners and
surfaces

Line and surface marking for many different uses

Highly pigmented special paint with high resistance to light and weather. The Linemarker is absolutely perfect for permanent marking works in, among other places, workshops, warehouses, open spaces and industrial facilities, but also on playgrounds and sports grounds. Wherever good wear resistance and lasting visibility are required.

Characteristics

- High-coverage, wear-resistant quality
- Only a light shake required, even after longer storage periods
- High resistance to light and weather
- Wide range of colours available, including correction colours
- Excellent dirt-repelling properties
- Quick drying times
- Clear, precise and clean markings with a minimum of spray mist
- Environmentally friendly and not injurious to health
- Ideal for use with sealing varnish. The seal protects against increased wear where there are high levels of mechanical stress

2K LINEMARKER

2K Linemarker for professional lines

When painted lines need to meet the highest standards, this highly pigmented special paint with patented 2-component technology comes into its own. Due to the chemical drying, chemical cross-linking of the base paint and the hardener occurs, which results in hard-wearing surfaces. After drying, the markings are resistant to solvents.

Characteristics

- High-coverage quality
- Extremely wear-resistant
- Excellent resistance to light and weather
- Resistant to petrol and chemicals
- Excellent dirt-repelling properties
- Clear, precise and clean markings with a minimum of spray mist
- Long can life
- Quick drying times
- Wide range of colours available, including correction colours
- Ideal for use with sealing varnish

Technical data sheet

	387067	2K Linemarker, blue	500 ml	 4 048500 387067

For the 2K Linemarker products, a patented, safe to use 2-component technology is used, which satisfies professional requirements. The hardening agent is contained in a separate cartridge in the can, and is only released once activated. The base and hardener are tailored precisely to each other, and are ready for immediate use, without the need for a laborious mixing procedure. Mixing is therefore a clean process without risk to health, as there is no contact with the active ingredients.

Benefits

- Hardener tailored optimally to the product, with no quantities remaining
- Easy to use
- Benefits for occupational safety and

PROFESSIONAL MARKING

Spraying aids for

- Linemarker 500/750 ml
- 2K Linemarker 500 ml
- Ecomarker 750 ml

For comfortable working, even during lengthy marking works, the following sturdy spraying aids are available, in various lengths and configurations.

Speedmarker short
Item no 270161

Marking pistol for a distance range of 20–50 cm.

Speedmarker long
Item no 270178

Perfect for lengthy marking works, without needing to bend.

Speedmarker 2-wheel
Item no 286179

Easy, comfortable marking with line guide.
Safe rolling motion thanks to hard rubber wheels.

Spraying aids for products with a safety cap

- Spotmarker 500 ml
- Ecomarker 500 ml

Marking roller
Item no 899836

Perfect for protracted marking works, without needing to bend

Marking pistol
Item no 123030

For working in close range to the object being marked

Belt holster
Item no 324772

The belt holster is ideal for carrying when you need to keep your hands free. Suitable for all COLORMARK cans.

Tip:

When using the spraying aid, the safety cap must not be removed.

Operating
instructions film

Marking carts for

- Linemarker 500/750 ml
- 2K Linemarker 500 ml
- Ecomarker 750 ml

For clean, quick and economical line marking indoors and outdoors, our high quality Speedliner² and Speedliner² AIR marking carts are available. With both carts, the spray width can be set from between 4 and 12 centimetres, and depending on requirements, you can spray with two cans simultaneously, which increases wear resistance and working speed. What's more, for even more extensive markings, the cart has space for up to four cans of marking spray. And for tricky edge markings on walls or pallet spaces, the marking equipment can simply be fixed so that it faces outwards.

Characteristics

- Sturdy construction and quiet running
- Simultaneous marking with two cans possible
- For 500, 600 and 750 ml cans
- Easy handling
- Spray width setting from 4-12 cm
- Handle can be adapted for left-handed or right-handed users

Marking cart Speedliner² Item no 262760

Precise line marking with simultaneous spraying of two COLORMARK spray cans, for double working speed.

Marking cart Speedliner² AIR Item no 290459

The Speedliner², with pneumatic tyres so the cart runs even quieter on difficult terrain, such as grass or similar.

Marking rails

The parts are made of stainless steel, and are magnetically attached to both sides of the cart. They serve as boundary lines during marking, enabling you to create particularly clear edges. Available in sets of two.

- Marking rail 12 cm, item no 338748**
- Marking rail 10 cm, item no 338755**
- Marking rail 7.5 cm, item no 338762**

Printed on 100%
recycled paper.
